Pneumococcal 20-valent
Conjugate Vaccine

**HIDING FROM PNEUMOCOCCAL
PNEUMONIA WON'T HELP
PROTECT YOU FROM IT.**

BUT PREVNAR 20 CAN

Ask your doctor, nurse, or pharmacist
about **PREVNAR 20** today.

PREVNAR 20 is a pneumococcal vaccine that helps protect against certain diseases such as pneumonia, bacteremic pneumonia, sepsis or bacteremia and meningitis caused by 20 types of the bacteria *Streptococcus pneumoniae* in adults 18 years and older.

WHAT IS PNEUMOCOCCAL PNEUMONIA?

A lung infection caused by a common bacteria called *Streptococcus pneumoniae*

An infection spreading from person to person through talking, coughing, or close contact

A life-threatening infection potentially requiring admission to the hospital or intensive care unit

PREVNAR 20 is not indicated to reduce complications of pneumococcal diseases, such as hospitalization and death.

WHO'S AT RISK?

Adults 50+ were observed to be at increased risk in studies.

Adults 18+ with one of these conditions were observed to be at increased risk in studies*:

Diabetes
3X risk increase vs. healthy adults

Smoking
3-4X risk increase vs. healthy adults

Chronic heart disease
4-5X risk increase vs. healthy adults

Chronic lung disease[†]
4-10X risk increase vs. healthy adults

* Using information from American healthcare databases from 2006 to 2010, rates of pneumococcal disease were compared in immunocompetent adults with chronic medical conditions, immunocompromised adults, and in adults without these conditions. Risk profiles and episodes of pneumococcal disease—all-cause pneumonia, pneumococcal pneumonia, and invasive pneumococcal disease (IPD)—were established according to diagnosis, procedure, and drug codes.
[†] Including asthma and chronic obstructive pulmonary disease (COPD).

Other conditions were observed to **increase the risk of pneumococcal pneumonia** in studies:

- Cancer
- Chronic liver disease
- Alcoholism
- Certain neurological conditions
- Living in long-term care facilities

PREVNAR 20 CAN HELP PROTECT YOU

Pfizer's **PREVNAR 20** is a vaccine to help protect against pneumococcal pneumonia caused by **20 types of *Streptococcus pneumoniae***.

PREVNAR 20, like any vaccine, does not guarantee 100% protection for all persons who are vaccinated. Adverse events may occur. The most common adverse reactions included swelling/redness at injection site and fever (38°C or higher).

Help protect yourself against pneumococcal pneumonia, with a single-dose of **PREVNAR 20**. Some individuals may require more than one dose.

YOU CAN'T HIDE FROM PNEUMOCOCCAL PNEUMONIA

Start the conversation about
PREVNAR 20 today.

Ask your doctor, nurse, or pharmacist if your situation puts you at risk of pneumococcal pneumonia:

- Your age
- Your immune system
- Your health condition(s)
- Your medication(s)

Visit PREVNAR20.ca
for more information

PREVNAR 20 may be covered by your **private insurance plan**. To find out, contact your insurer and provide the DIN: 02527049.
